Key Features

Dutral[®] K elastomers are characterized by excellent resistance to ageing and weathering, good resistance to both high and low temperatures, low permanent set values, good resistance to a large number of chemicals.

Dutral[®] K TER WO65 is a very high molecular weight terpolymer of medium-high diene content, extended with 50% highly purified paraffinic oil.

It has good low temperature performances, high green strength, very fast curing and high state of cure.

Dutral[®] K TER WO65 was developed to be used advantageously in TPV. It can accept the highest amount of filler and plasticizer.

Dutral[®] K TER WO65 can be used for producing low hardness and high elastic articles.
